## MRSA-Screening

Dear Sir or Madame

To avoid any delay for inpatient admittance to the rehabilitation in our clinic we may ask you to arrange a smear test for determination of MRSA (Methicillin resistant staphylococcus aureus) in following points:

- nose
- throat/pharynx
- groin/inguina
- urine
- wounds
- percutaneous punctuations

For reasons of hospital hygiene and to fully utilize the therapy program, inpatient admission to our clinic is only possible if the MRSA-Screening results are negative.

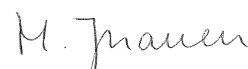

We would like to ask you to send the current reports direct to our inpatient admission department via Fax +41 (0)81 303 14 35.

Thank you very much for your understanding and collaboration.

Sincerely

Dr. G. Eglseer  
Executive physician rheumatology  
Member commission for hygiene

Manuela Inauen  
Consultant for hospital hygiene
